## Design Services

Our team of office planning and design experts will provide all of the services that you need to properly furnish your upgraded office space. Our designers will create a floor plan that considers your existing team structure, overall business objectives, and predicted changes in staff levels and office culture to create a space that is attractive, functional and safe.

### Comprehensive & State Of The Art

When it comes to furnishing an office, we understand the importance of convenience and attention to detail. Our team will work with yours to identify potential issues and how we can overcome them in a creative way to plan your perfect office space. Our design team is well-versed in the latest interior design practices and use AutoCAD software to create accurate space plans. We can create 3D color renderings of the furniture in your space to help you visualize what your office will look like.

### Proven Results, Modern Convenience

With over 15-years of designing office spaces nationwide, our team uses our experience to create an efficient and convenient experience for our clients. We use current video conferencing/screen sharing technology to review proposals and drawings with your project team wherever they may be located. This allows us to capture your feedback in real-time, enabling us to get final solutions into your hands sooner with less effort.

### Adaptive Reuse Of Existing Furniture

Our company was founded on the belief that furniture in great condition should not be discarded if you decide to remodel your space. Our team can refurbish and remanufacture your existing furniture as well as reconfigure your space to match the design aesthetic of your upgraded office. This will not only save you money versus buying new office furniture but can also qualify you for LEED Credits and avoid unnecessary waste going to landfills.
